

(4)

$$\frac{3x}{2} - 5 = 7$$

$$\frac{3x}{2} - 5 = 7$$

$$\frac{3x}{2} - 5 + 5 = 7 + 5$$

$$\frac{3x}{2} = 12$$

$$\frac{3x}{2} \div 3 = 12 \div 3$$

$$\frac{x}{2} = 4$$
$$x = 8$$

$$\frac{3x}{2} = 12$$

$$\frac{3x}{2} \times 2 = 12 \times 2$$

$$3x = 24$$

$$x = 8$$

(h)

Addition

①

$$X + 3 = 6$$

$$X + \cancel{3} - \cancel{3} = 6 - 3$$

$$X = 3$$

$$X = 3$$

$$\frac{5X}{3}$$

! check my answer

$$X + 3 = 6$$

$$3 + 3 = 6$$

$$6 = 6$$

linea

②

$$\boxed{2x - 5} = 7$$
$$+ 5 \quad + 5$$

$$2x = 12$$

$$2 \cdot x \div 2 = 12 \div 2$$

$$\boxed{x = 6}$$

check answer :-

$$2x - 5 = 7$$

$$2(6) - 5 = 7$$

$$12 - 5 = 7$$

$$7 = 7$$

$$\boxed{x = 3}$$

$$\frac{5x}{3}$$

Linear equation - $y = mx + b$

$$mx^2 + bx + c$$

$$3x + 1 = 19$$

$$-1 = -1$$

$$3x = 18$$

$$x = 6$$

$$x = 6$$

$$x = 6$$
